

UNIT II - Answer Key PDF

Core Python: Variables, Operators, Control Structures, Functions, Strings

Teacher-only answer key. Do not share this PDF with students before results are published.

Section A - MCQ Answer Key

Question	Answer	Question	Answer	Question	Answer
Q1	B	Q2	B	Q3	B
Q4	A	Q5	C	Q6	B
Q7	B	Q8	B	Q9	A
Q10	B	Q11	B	Q12	C
Q13	C	Q14	B	Q15	B
Q16	A	Q17	B	Q18	D
Q19	B	Q20	C	Q21	B
Q22	B	Q23	B	Q24	B
Q25	C	Q26	B	Q27	A
Q28	C	Q29	B	Q30	B

Section B - Fill-up Answer Key

Q.No	Accepted Answer(s)
1	programming
2	Python
3	interactive
4	statements / code
5	print()
6	sequential
7	alternative
8	true
9	else
10	looping
11	specific
12	reusability
13	single
14	def
15	indented
16	characters
17	immutable
18	n-1
19	-n
20	concatenation

Section C - Simple Coding Answer Key

Q1. Write `add_two_numbers(a, b)` that returns the sum.

```
def add_two_numbers(a, b):  
    return a + b
```

Q2. Write `format_sum(x, y)` returning the required formatted sentence.

```
def format_sum(x, y):  
    return f'The sum of {x} + {y} is {x + y}'
```

Evaluation notes: Equivalent `str.format()` solution is acceptable.

Q3. Write `vote_status(age)`.

```
def vote_status(age):  
    if age >= 18:  
        return 'Eligible to Vote'  
    return 'Not Eligible to Vote'
```

Q4. Write `grade_label(mark)`.

```
def grade_label(mark):  
    if mark >= 80:  
        return 'A'  
    elif mark >= 60:  
        return 'B'  
    elif mark >= 40:  
        return 'C'  
    else:  
        return 'Fail'
```

Evaluation notes: Order of conditions matters.

Q5. Write `square(x)`.

```
def square(x):  
    return x * x
```

Q6. Write `greet()` returning Welcome to Python.

```
def greet():  
    return 'Welcome to Python'
```

Q7. Write recursive `factorial(n)`.

```
def factorial(n):  
    if n == 0:  
        return 1  
    return n * factorial(n - 1)
```

Evaluation notes: Must work for non-negative integers.

Q8. Write `first_last(text)`.

```
def first_last(text):  
    return text[0] + text[-1]
```

Evaluation notes: Assume text is non-empty.

Q9. Write `replace_a(text)` replacing uppercase A with *.

```
def replace_a(text):  
    return text.replace('A', '*')
```

Evaluation notes: Only uppercase A is required.

Q10. Write `join_words(a, b)` concatenating with one space.

```
def join_words(a, b):  
    return a + ' ' + b
```

Evaluation notes: f-string or format version is acceptable.
